PROFESSIONAL SUMMARY

Technical Product Manager working on supply chain, procurement and ERP software. At Heizen I have run **15+ client engagements** and overseen **\$250k+** in project value inside **6 months**, taking multiple products from **0 to 1**. My work covers sourcing, purchase orders, goods receipts, supplier quality and landed cost, CPQ and quoting, B2B procurement and corporate gifting, and an agentic AI layer that sits on top of supply chain ERPs. Cut **INR 15 to 30 lakhs per year** in operating cost for **3+ clients** by replacing manual and legacy workflows with purpose-built platforms, and shipped features that expanded the paying client base on a B2B SaaS product.

EXPERIENCE

Heizen Hybrid, Hyderabad
Technical Product Manager Intern: Nov 2025 to Jun 2026 | Full-time: Jul 2026 to Present

- Own product delivery from discovery to launch on **15+ concurrent engagements** across supply chain, ERP, procurement, workforce management and AI, covering **\$250k+** in project value within **6 months**.
- Scoped an end-to-end SCM platform spanning sourcing, purchase orders, GRNs, GTNs, packing records and reverse GRNs, with multi-stage quality scoring, landed-cost computation and role-based access across the chain.
- Defined module-level scope for a B2B procurement and corporate gifting platform covering gift redemption, e-catalogue, analytics and trade promotion, reconciling the client BRD, meeting transcripts and email threads into one scope both sides signed off.
- Scoped a CPQ product for a consulting software client: admin portal for catalogue, pricing and template configuration plus a role-based quoting portal with approvals and dashboards, sized at **2 sprints and 80 hours** of build effort.
- Saved **3+ clients INR 15 to 30 lakhs per year** by moving manual and legacy processes onto custom platforms, and took multiple products from **0 to 1** including LLM and RAG-based systems.
- Grew the paying client base of a B2B SaaS platform by finding gaps in user interviews and writing the specs, wireframes and acceptance criteria engineering built from.

Crowdbuzz Remote
Project Manager and App Developer, Freelance Apr 2025 to Oct 2025

- Led the product lifecycle across client projects, coordinating cross-functional teams of designers and engineers.
- Ran stakeholder meetings and turned business objectives into roadmaps, specs and sprint plans, holding **100% client satisfaction** on delivered work.

Meet & More Remote
Flutter Developer Intern Apr 2025 to Oct 2025

- Built end-to-end mobile apps in Flutter with BLoC state management and REST API integration.
- Shipped real-time chat and Firebase Cloud Messaging notifications.

Taxian Remote
Software Engineer Intern Mar 2025 to Apr 2025

- Built web applications in Flutter and integrated Stripe and PayPal payment flows for live transaction workflows.

Apps AiT Remote
Android Developer Intern Sep 2024 to Mar 2025

- Shipped Flutter and Firebase apps in an Agile team; contributed to products that crossed **1,000+ Play Store downloads**.
- Integrated machine learning models and cloud storage to support scale.

KEY PROJECTS

Supply Chain Control Layer | Agentic Intelligence Layer over Supply Chain ERPs

Python, React, Vite, PostgreSQL, LLM APIs | reference deployment on a fresh-produce ERP

- Built a layer over an existing supply chain ERP that reads its alerts, attaches the **money at stake**, explains the exception in plain English, drafts the action and routes it to the role that owns it. Nothing writes back until a human approves.
- Pivoted the product after testing against real data: instead of re-detecting exceptions the host ERP already flags, the layer enriches them and owns two checks of its own, selling below landed cost and produce rejected at the customer point.
- Added a coverage gate so a rule only switches on where that deployment's data supports it. On the reference dataset (**357 POs, ~560 shipments**) this turned two rules off instead of shipping noise.
- Set a hard trust rule: every money figure is computed in Python and the LLM only turns numbers into wording. Plug-and-play across ERPs through one read adapter per source.

Vorizon | AI Employee Platform

React, TypeScript, Node.js, Express, MongoDB, Retell AI, Claude API, Razorpay | vorizon.vercel.app

- Built a platform that creates, trains, tests and deploys AI voice agents for inbound business lines and outbound campaigns, monetised on usage-based billing at **\$0.10 per conversation minute** with automatic metering.
- Made telephony compliance a product feature: TCPA consent tracking, Do-Not-Call enforcement and recording disclosure, backed by role-based access, rate limiting and audit logging.
- Cut setup friction with a guided wizard, live AI interview testing of agents before launch, and bulk contact import with E.164 validation.

MindMark | Context Recovery for Knowledge Workers

Next.js 14, TypeScript, Supabase, Groq (Llama 3.3 70B, Whisper) | github.com/SwapnaneelSarkar/MindMark

- Defined **three success metrics** before writing code, **capture under 200 ms**, AI brief quality and habit formation, then prioritised the roadmap against them.
- Shipped a global-shortcut capture panel with voice or text input that records context at the moment of interruption, then generates an AI re-entry brief with next actions.
- Drove activation with a **5-save guest mode** before sign-up, a focus-lane timeline showing recovery rate, and offline PWA support.

CodeContext CLI | Open-Source Developer Tool (MIT)

TypeScript, Node.js, Turborepo, Tree-sitter, Next.js 14, LLM APIs

- Set the vision for a tool that indexes local codebases into per-file summaries, dependency graphs and agent-ready markdown so AI coding assistants navigate large repos on **far fewer tokens**.
- Owned the v0.1.0 scope and trade-offs: Tree-sitter parsing, Ollama as default local LLM for zero API-key friction, content-hash manifests to cut re-processing cost.

EDUCATION

Vellore Institute of Technology, Andhra Pradesh (VIT-AP University) Amaravati
B.Tech, Computer Science and Business Systems | CGPA 8.19/10.0 Sep 2022 to May 2026

SKILLS

Product: Discovery and User Interviews, Requirements Gathering, BRD and PRD Writing, Scoping and Estimation, Roadmapping, Prioritisation, User Stories, Wireframing, Metrics Definition, Agile and Scrum, Stakeholder Management

Domain: Supply Chain and SCM, Procurement and Sourcing, Purchase Orders, GRN/GTN and Reverse GRN, Supplier Management, Quality Scoring, Landed Cost, Catalogue, CPQ, ERP Workflows, B2B SaaS

Technical: TypeScript, Python, Dart, SQL; Next.js, React, Node.js, Flutter, REST APIs; Supabase, Firebase, MongoDB, PostgreSQL; Git, Figma, Vercel; Razorpay, Stripe

AI: LLM and RAG product development, agentic workflows with human approval, Claude and OpenAI APIs, Groq, Ollama, Whisper
